B.Tech CSE, Maharishi Markandeshwar University (2017–2021) · Anthropic Claude 101 Certification (2025)

## SUMMARY

Backend engineer with 4+ years building event-driven, high-throughput systems in enterprise environments. Currently owning the New SFDC ↔ Legacy SFDC ↔ Siebel integration at Equinix — a critical workstream in the company-wide Lead-to-Cash (LTC) transformation. Ship production AI-augmented side projects (Claude routines, MCP servers, full-stack mobile apps) outside of work. Looking for Staff-level scope where I can drive architecture, mentor engineers, and own systems end-to-end.

## EXPERIENCE

### Equinix · Senior Associate Software Engineer

Mar 2023 – Present · Bangalore, India

#### Lead-to-Cash (LTC) Coexistence — New SFDC ↔ Legacy SFDC & Siebel sync

- Owned end-to-end design and delivery of a Kafka-driven integration that bidirectionally syncs every Account and Contact created in Equinix's new Salesforce instance to legacy Salesforce and Siebel — keeping three customer-master systems consistent through a multi-year migration window. **Live in production**, processing ~500 events/day in the MVP rollout and built to scale as the full LTC cutover ramps.
- Architected the transformation layer using Apache Velocity templates, mapping events to target-system APIs while handling idempotency, retries, and field-level edge cases.
- Drove cross-team alignment across SFDC, Siebel, MDM, and consuming-system teams — clarified API contracts, resolved integration blockers, and served as the single technical point of contact for the sync.

#### Account & Contact Platform — Equinix's customer-data source of truth

- Core contributor to the platform exposing standardized DIH APIs over Informatica MDM — serving ~30K Account & Contact API calls per day on average and bursting to ~150K, across sales, ops, and finance systems.
- Designed and shipped Java + Spring Boot microservices that eliminated direct MDM access for consuming applications, reducing duplicated lookups and tightening data consistency across the org.
- Built Kafka-based event integrations to decouple upstream/downstream systems, replacing fragile point-to-point integrations with a durable event log.
- Built Apache NiFi orchestration and ingestion pipelines with auditing and traceability for governance and compliance.
- Tuned PostgreSQL schemas and queries for high-throughput transactional workloads; set up Grafana monitoring and GitHub Actions CI/CD for the platform.

**Stack** — Java · Spring Boot · Apache Kafka · Apache Velocity · Apache NiFi · PostgreSQL · Salesforce · Siebel · Informatica MDM · Grafana · GitHub Actions

### Plus Offices · Software Engineer

Aug 2021 – Feb 2023 · Gurgaon, India

- Built a coworking-space aggregation platform from scratch — real-time workspace availability, bookings, and subscription billing.
- Designed REST APIs in Java + Spring Boot, integrated payment gateways, and modeled transactional + analytical data across PostgreSQL and MongoDB.
- Cut database load and improved p95 response time on hot read paths using Redis caching; built ingestion/analytics pipelines in Apache NiFi.

**Stack** — Java · Spring Boot · PostgreSQL · MongoDB · Redis · Apache NiFi · GitHub Actions

## SIDE PROJECTS

**Kite Intraday Stock Shortlister** · *Claude* · *MCP* · *Kite Connect* A Claude routine that runs daily against the Kite MCP server and shortlists 5–10 high-probability stocks for intraday trading. Combines market-data pulls, screening rules, and LLM reasoning into a single autonomous workflow.

**Slowly — Wellness App** · *React Native* · *Python* · *FastAPI* Frames wellness as a practice to keep, not a score to optimise. Every day surfaces five small things; over weeks the days accumulate into a Story. Built end-to-end (RN client + FastAPI backend) using Claude Code under [SlowlyLabs](https://SlowlyLabs.com).

**Cotrader** · [github.com/SlowlyLabs/Cotrader](https://github.com/SlowlyLabs/Cotrader) Personal, local-first algorithmic trading research and execution system for NSE cash equities and options. Designed and shipped using Claude Code.

## SKILLS

**Languages** Java · SQL · Python · TypeScript **Backend** Spring Boot · FastAPI · REST · Microservices **Mobile** React Native

**Data** Kafka · NiFi · PostgreSQL · MongoDB · Redis **Infra** Docker · Kubernetes · AWS · GitHub Actions **AI Dev**

Claude Code · Anthropic API · MCP
